Art Unit: 3692

#### **DETAILED ACTION**

#### Status of Claims

- 1. This action is in reply to the response filed on 21<sup>st</sup> of April 2008.
- 2. Independent claims 1, 11, 30, and 33 have been amended. Also dependent claims 17, 23, 25, and 34 have been amended.
- 3. Claims 1-34 are currently pending and have been examined.
- **4.** The rejections of claims 1, 11, 30, and 33 have been updated to reflect the amendments.

#### Response to Arguments

**5.** Applicant's arguments with respect to claims 1-34 have been considered but are moot in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 101

6. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

7. Claims 33 and 34 are rejected under 35 U.S.C. 101 because the claimed invention is directed to two statutory subject matters. The applicant is only allowed to claim one statutory subject matter.

## Claim Rejections - 35 USC § 112

- **8.** The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- **9.** Claim 31 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 3692

#### As per Claim 31:

The claim 31 recites the limitation the types of transactions performed. There is
insufficient antecedent basis for this limitation in the claim. The applicant never amended
the claim. Appropriate correction is required.

#### Claim Rejections - 35 USC § 101

**10.** 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Appropriate correction is required.

11. Claim 34 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-functional data. Replacing the words *computer program code means* with "computer executable program" is a suggestion for how to bring these claims into compliance with 35 U.S.C. 101 because "a computer-executable program tangibly embodied on a computer readable medium" is functional statutory subject matter.

## Claim Rejections - 35 USC § 103

- **12.** The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- **13.** The factual inquiries set forth in *Graham* **v.** *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.

Art Unit: 3692

2. Ascertaining the differences between the prior art and the claims at issue.

3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or

nonobviousness.

Examiner's Note: The Examiner has pointed out particular references contained in the prior art

of record within the body of this action for the convenience of the Applicant. Although the

specified citations are representative of the teachings in the art and are applied to the specific

limitations within the individual claim, other passages and figures may apply. Applicant, in

preparing the response, should consider fully the entire reference as potentially teaching all or

part of the claimed invention, as well as the context of the passage as taught by the prior art or

disclosed by the Examiner.

14. Claims 1-9, 11, 30, and 32-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Walker (US 5,794,207) in view of Fielder et al. (hereinafter "Fielder"); (US 5,995,624).

As per Claim 1:

Walker as shown, also discloses the following limitations:

Receiving an electronic communication from a first party, said electronic

communication identifying a second party to a transaction between said first

party and said second party, said identification of said second party comprising

an alias such that said second party need not reveal their true identity to said first

party to conduct said transaction; (See at least Column 26, Line 55+)

Using said identification received from said first party to retrieve data that is

related to said second party and material said transactions; (See at least Column

19, Line 29+)

Analyzing said retrieved data to determine whether to authorize said transaction;

and (See at least Column 8-9, Line 66+)

Art Unit: 3692

Providing an indication to said first party as to whether said transaction is

authorized. (See at least Column 8-9, Line 66+)

However, Walker does not disclose the following limitations, but Fielder however as

shown, does:

Wherein the alias is generated upon matching an account number

associated with a portion of an account application with an account

number associated with an existing account; (See at least Column 2, Line

54+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Fielder's authentication and information encryption system to generate an alias

after authenticating the account identifier. This would greatly increase the security of the

system and ultimately increase the efficiency of the system.

As per Claim 2:

Walker as shown, also discloses the following limitations:

Transaction information including at least one of the group of transaction date,

transaction time, transaction amount, transaction type, or an identification of said

first party. (See at least Column 9, 17+)

As per Claim 3:

Walker as shown, also discloses the following limitations:

Electronic communication further comprises a PIN. (See at least Column 23,

25+)

Art Unit: 3692

## As per Claim 4:

## Walker as shown, also discloses the following limitations:

 Service provider comprises at least one of the group of vendors, merchants, wholesalers, retailers, or ecommerce providers. (See at least Column 10, Line 50+)

## As per Claim 5:

# Walker as shown, also discloses the following limitations:

 Retrieved data comprises at least one of personal or business information. (See at least Column 8, Line 42+)

# As per Claim 6:

## Walker as shown, also discloses the following limitations:

 Business information comprises financial information relating to said second party. (See at least Column 9, Line 1+)

## As per Claim 7:

## Walker as shown, also discloses the following limitations:

• Communication link comprises at least one of a public or a private communication system. (See at least Fig.2, label 245)

# As per Claim 8:

## Walker as shown, also discloses the following limitations:

Communication link comprises at least one of the group of the internet, a PSTN,
 or a preexisting public communication system. (See at least Column 8, Line 59+)

Art Unit: 3692

As per Claim 9:

Walker as shown, also discloses the following limitations:

• Further comprising the step of confirming receipt of said electronic

communication received from said first party. (See at least Column 9, Line 5+)

As per Claim 11:

Walker as shown, also discloses the following limitations:

A first party to a transaction receiving an identification of a second party

identification is an alias, enabling said second party to enter into said transaction

anonymously; (See at least Column 26, Line 55+)

First party causing said identification of said second party to be transmitted

electronically to an information hub for authentication of said transaction; (See at

least Column 10, Line 57+)

Communication hub receiving said electronic transmission from said first party,

said electronic transmission including said second party identification; (See at

least Fig. 1, and see at least Column 8, Line 57)

· Using said identification received from said first party to retrieve data that is

related to said second party and material to said transaction; (See at least

Column 19, Line 29+)

Analyzing said retrieved data to determine whether to authorize said transaction;

and (See at least Column 10, Line 57+)

Providing an indication to said first party as to whether said transaction is

authorized without revealing a true identification of said second party. (See at

least Column 9, Line 5+); (See at least Column 10, Line 1+)

However, Walker does not disclose the following limitations, but Fielder however as

shown, does:

Art Unit: 3692

• Wherein the alias is generated upon matching an account number

associated with a portion of an account application with an account

number associated with an existing account; (See at least Column 2, Line

54+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Fielder's authentication and information encryption system to generate an alias

after authenticating the account identifier. This would greatly increase the security of the

system and ultimately increase the efficiency of the system.

As per Claim 30:

Walker as shown, also discloses the following limitations:

• Receiving an electronic communication from a first party, said electronic

communication identifying a second party to a transaction between said first

party and said second party, said identification of said second party comprising

an alias such that said second party need not reveal their true identity to said first

party to conduct said transaction; (See at least Column 26, Lines 55+)

Retrieving data related to said second party and material to said transaction, said

retrieval based on said identification received from said first party; (See at least

Column 19, Lines 29+)

Analyzing said retrieved data to determine whether to authorize said transaction;

(See at least Column 8-9, Lines 66+)

Providing an indication to said first party as to whether said transaction is

authorized. (See at least Column 8-9, Lines 66+)

However, Walker does not disclose the following limitations, but Fielder however as

shown, does:

Art Unit: 3692

• Wherein the alias is generated upon matching an account number

associated with a portion of an account application with an account

number associated with an existing account; (See at least Column 2, Line

54+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Fielder's authentication and information encryption system to generate an alias

after authenticating the account identifier. This would greatly increase the security of the

system and ultimately increase the efficiency of the system.

As per Claim 32:

Walker as shown, also discloses the following limitations:

Confirming receipt of said electronic communication received from said first

party. (See at least Column 9, Lines 5+)

As per Claim 33:

Walker as shown, also discloses the following limitations:

• At least one processor; (See at least Fig. 2, label 205)

• At lease one database accessible by said processor; (See at least Fig. 2, label

250)

• A computer-readable medium comprising computer program code executable

by said processor and configured to accommodate anonymous transactions

between the two or more parties, said computer program comprising computer

program code means for (See at least Fig. 2, label 240)

Receiving an electronic communication from a first party, said electronic

communication identifying a second party to a transaction between said first

party and said second party, said identification of said second party comprising

Art Unit: 3692

an alias such that said second party need not reveal their true identity to said first

party to conduct said transaction; (See at least Column 26, Lines 55+)

Retrieving data from said database, wherein said data is related to said second

party and material to said transaction, said retrieval based on said identification

received from said first party; (See at least Column 19, Lines 29+)

Analyzing said retrieved data to determine whether to authorize said transaction;

(See at least Column 8-9, Lines 66+)

Providing an indication to said first party as to whether said transaction is

authorized. (See at least Column 8-9, Lines 66+)

However, Walker does not disclose the following limitations, but Fielder however as

shown, does:

Wherein the alias is generated upon matching an account number

associated with a portion of an account application with an account

number associated with an existing account; (See at least Column 2, Line

54+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Fielder's authentication and information encryption system to generate an alias

after authenticating the account identifier. This would greatly increase the security of the

system and ultimately increase the efficiency of the system.

As per Claim 34:

Walker as shown, also discloses the following limitations:

· Confirming receipt of said electronic communication received from said first

party. (See at least Column 9, Lines 5+)

Art Unit: 3692

15. Claims 12-16 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Walker/

Fielder in view of Breck et al. (hereinafter "Breck"); (US 2004/ 0158532 A1).

As per Claim 12:

Combination of Walker/Fielder discloses the limitations as shown in the rejections above. But,

Walker/Fielder as shown does not discloses the following limitation, but Breck does:

Providing an alias account for credit cardholder on a credit cardholder on a credit

card processing system that is associated with a first credit card and that

identifies the cardholder with an alias identity; (See at least Paragraphs 0013-19,

0048-0060)

• Providing a primary account for the credit cardholder on the credit card

processing system that is associated with a second credit card and identifies the

cardholder with the cardholder's real identity; and (See at least Paragraphs 0013-

19, 0048-0060)

Providing secure database to create a relationship between the alias account

and the primary account to carry out credit card processing functions, (See at

least Paragraphs 0013-19, 0048-0060)

Step of using said identification received from said first party to retrieve data

related to said second part and material to said transaction comprises retrieving

data from said secure database. (See at least Fig. 8, labels 115, 120, 18)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Breck's system to have a secured database of two separate

accounts(alias/primary) to anonymously identify the cardholder without revealing the

real identity. This greatly increases the security of the identity of the cardholder.

Art Unit: 3692

As per Claim 13:

The combination of Walker / Fielder / Breck discloses the limitations as shown in the rejections

above. Furthermore, Breck as shown, also discloses the following limitations:

Creating the relationship between the alias and primary account by constructing

a database that associates a second primary account and a second alias

account stored in the secure database. (See at least Paragraphs 0042-59, 0066-

0086)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Breck's system to create a relationship by linking second account having its

own alias and primary account with the first account to effectively manage two linked

accounts in a single secure database.

As per Claim 14:

The combination of Walker / Fielder / Breck discloses the limitations as shown in the rejections

above. Furthermore, Breck as shown, also discloses the following limitations:

Constructing a first database that contains information for setting up the second

alias account in the secure database; (See at least Fig. 9, Paragraphs 0042-59,

0066-0086)

Constructing a second database containing information for assigning an account

number to the second alias account setup from information in the first database;

(See at least Fig. 9, Paragraphs 0042-59, 0066-0086)

Constructing a third database containing information to create a profile for an

issuer that is assigned to the second alias account constructed from the first

database; (See at least Fig. 9, Paragraphs 0042-59, 0066-0086)

Constructing a fourth database that contains information for matching the second

alias account created from the first database and a second primary account that

Art Unit: 3692

corresponds to the primary account on the card processing system; and (See at least Fig. 9, Paragraphs 0042-59, 0066-0086)

Constructing a fifth database containing alias and primary account information for

replacing the alias identity with the cardholder's real identity retrieved from the

second primary account. (See at least Fig. 9, Paragraphs 0042-59, 0066-0086)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Breck's system to create a relationship by linking multiple accounts with

each account having its own alias and primary account to effectively manage multiple

accounts in a single secure database.

As per Claim 15:

The combination of Walker / Fielder / Breck discloses the limitations as shown in the rejections above. Furthermore, Breck as shown, also discloses the following limitations:

- Receiving a security stub from an applicant and using the security stub to setup
  an alias account in the secure database that corresponds to a second alias
  account in the credit card processing system; (See at least Fig. 1, labels 2, 15, 3)
- Providing the alias account's information to the credit card processing system so that the credit card processing system can set up the second alias account; (See at least Fig. 8, labels 105, 6)
- Receiving a credit card application at the credit card processing system from an applicant to setup the primary account in the credit card processing system; and (See at least Fig. 8, labels 110, 18)
- Providing the primary account's information from the credit card processing system to the secure database so that the secure database can setup a second primary account that corresponds to the account in the credit card processing system. (See at least Fig. 8, labels 5, 6)

Art Unit: 3692

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Breck's system to setup a anonymous credit card processing system on a

secure database to secure the real identity of the applicant. This would greatly

increase the security of the identity.

As per Claim 16:

The combination of Walker / Fielder / Breck discloses the limitations as shown in the rejections

above. Furthermore, Breck as shown, also discloses the following limitations:

Receiving the security stub with a password and a first document tracking

number; (See at least Fig. 1, label 15, Paragraphs 0054, 0072, 0087-91)

Receiving the credit card application with a source of credit information and a

second document tracking number that corresponds to the first document

tracking number on the security stub; (See at least Fig. 1, label 15, Paragraphs

0072+)

Creating the relationship between the alias account and the primary account

based on the first and second document tracking number. (See at least

Paragraphs 0072+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Breck's system to encode different documents with combination of tracking

numbers to effectively track and manage plurality of documents across multiple

accounts.

As per Claim 18:

The combination of Walker / Fielder / Breck discloses the limitations as shown in the rejections

above. Furthermore, Breck as shown, also discloses the following limitations:

Art Unit: 3692

Combining the second primary account and the second alias account into a new

account; and (See at least Paragraphs 0013-0015)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Breck's system to give the anonymous users the flexibility to quickly create

new account by combining secondary accounts (alias/primary) together once it is

needed.

However, Breck does not disclose the following limitations, but Buchanan however as

shown, does:

Closing the primary or alias account on the credit card processing system; (See

at least Fig. 1, label 38)

Transmitting an indication to the secure database that the primary or alias

account has been closed; (See at least Fig. 2, labels 42, 44)

Receiving the indication at the secure database that the primary or alias account

has been closed and in response to receiving the indication; (See at least Fig. 2,

labels 58, 44)

Transmitting the new account to the credit card processing system (See at least

Fig. 2, label 84)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker/Breck's method of anonymous

transaction as taught by Buchanan's method to give the anonymous users the

flexibility to quickly close the primary accounts (alias/primary) once the accounts are

not needed.

16. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Walker/ Fielder/Breck in

view of Buchanan et al. (hereinafter "Buchannan"); (US 5,950,179).

Art Unit: 3692

As per Claim 17:

The combination of Walker / Fielder / Breck discloses the limitations as shown in the rejections

above. Furthermore, Breck as shown, also discloses the following limitations in view of

Buchanan et al. (hereinafter "Buchanan"); (US 5,950,179).

Creating a first credit line for the primary account on the credit card processing

system; (See at least Paragraphs 0104)

Transmitting an indication of the first credit line from the credit card processing

system to the secure database; (See at least Fig.11, label 6)

Receiving the indication of the first credit line at the secure database and

apportioning the fast credit line and (See at least Paragraphs 0104)

Assigning a second credit line to the primary account and a third credit line to the

alias account; and (See at least Fig. 11, labels 5, 91)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker/Fielder/Breck's system as further taught

by Breck's system to add an ability to create multiple credit lines to accounts in the

credit card processing system to gives the users the flexibility to anonymously create

credit lines.

However, Walker/Fielder/Breck does not disclose the following limitations, but Buchanan

however as shown, does:

Transmitting a message reflecting the second credit line back to the credit card

processing system to replace the first credit line as a new credit line associated

with the primary account. (See at least Fig. 2, labels 48, 92)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker/Fielder/Breck's system as taught by

Buchanan's method to give the anonymous users the flexibility to transmit and

quickly change credit line in the credit card processing system.

Art Unit: 3692

17. Claims 10, 19-29, 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Walker/

Fielder in view of Ginter (US 6,237,786 B1).

As per Claim 10:

Combination of Walker/Fielder discloses the limitations as shown in the rejections above. But,

Walker/Fielder as shown does not discloses the following limitation, but Ginter does:

Second party is a child under age of majority. (See at least Page 271, Line 41+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Ginter's method to allow the under aged majority to be anonymous so their

identity would be hidden. This would greatly increase the security of the identity of the

minor.

As per Claim 19:

Combination of Walker/Fielder discloses the limitations as shown in the rejections above. But,

Walker/Fielder as shown does not discloses the following limitation, but Ginter does:

• Second party is a child under the age of majority. (See at least Column 271, Line

41)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Ginter's method to allow the under aged majority to be anonymous so their

identity would be hidden. This would greatly increase the security of the identity of the

minor.

Art Unit: 3692

As per Claim 20:

The combination of Walker/ Fielder /Ginter discloses the limitations as shown in the rejections

above. Furthermore, Ginter as shown, also discloses the following limitations:

Transaction includes the purchase only of one or more predetermined types of

items. (See at least Column 12, Lines 23+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Ginter's method to set a range of specific items to be purchased. This will

effectively restrict the user from buying unnecessary items.

As per Claim 21:

The combination of Walker/ Fielder /Ginter discloses the limitations as shown in the rejections

above. Furthermore, Ginter as shown, also discloses the following limitations:

Indication provided does not authorize the transaction when the transaction

includes a purchase of an item other than a item that has been predetermined by

an adult to be eligible for purchase by the child. (See at least Column 324, Lines

11+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Ginter's method to restrict the under aged majority to only purchase items

that are approved by adults. This will prevent children from purchasing inappropriate

items.

Art Unit: 3692

As per Claim 22:

The combination of Walker/ Fielder /Ginter discloses the limitations as shown in the rejections

above. Furthermore, Ginter as shown, also discloses the following limitations:

• Predetermined items are made available for purchase by the child via a website.

(See at least Column 285, Lines 45+); (See at least Column 271, Lines 41+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Ginter's method to allow children to use the website to quickly and

accurately purchase the predetermined items.

As per Claim 23:

The combination of Walker/ Fielder /Ginter discloses the limitations as shown in the rejections

above. Furthermore, Ginter as shown, also discloses the following limitations:

• Transaction comprising a purchase of an item from a predetermined website is

authorized by the provided indication. (See at least Column 285, Lines 45+);

(See at least Column 271, Lines 41+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Ginter's method to allow anonymous users to use the predetermined

website to quickly and accurately purchase the items.

As per Claim 24:

The combination of Walker/ Fielder /Ginter discloses the limitations as shown in the rejections

above. Furthermore, Ginter as shown, also discloses the following limitations:

Wherein an area of the website in which particular predetermined items are

offered for purchase are password protected. (See at least Column 324, Lines

11+)

Art Unit: 3692

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the Walker's method of anonymous transaction as taught by Ginter's method to password protect particular predetermined items to further protect anonymous users from purchasing unnecessary and inappropriate items.

As per Claim 25:

The combination of Walker/ Fielder /Ginter discloses the limitations as shown in the rejections above. Furthermore, **Ginter as shown**, **also discloses the following limitations**:

 Wherein a password is provided to the child by an adult, thereby enabling the child to enter the area of the website for purchase of a particular predetermined item. (See at least Column 324, Lines 11+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the Walker's method of anonymous transaction as taught by Ginter's method to only allow adult to provide the password to the child for entering the website. This would restrict the child from entering inappropriate websites to purchase a particular predetermined item.

As per Claim 26:

The combination of Walker/ Fielder /Ginter discloses the limitations as shown in the rejections above. Furthermore, **Ginter as shown**, **also discloses the following limitations**:

• Entity that maintains the website is an internet service provider. (See at least Column 97, Lines 42+); (See at least Column 285, Lines 47+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the Walker's method of anonymous transaction as taught by Ginter's method to allow internet service provider to maintain the entity of the website to efficiently administer the website at the same time.

Art Unit: 3692

As per Claim 27:

The combination of Walker/ Fielder /Ginter discloses the limitations as shown in the rejections

above. Furthermore, Ginter as shown, also discloses the following limitations:

Transaction comprises payment by the second party with a credit card. (See at

least Column 271, Lines 41+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Ginter's method to allow the anonymous users to make a transaction with a

credit card to quickly and safely make a payment.

As per Claim 28:

The combination of Walker/ Fielder /Ginter discloses the limitations as shown in the rejections

above. Furthermore, Ginter as shown, also discloses the following limitations:

Transaction comprises payment by the second party with a debit card. (See at

least Column 240, Lines 10+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Ginter's method to allow the anonymous users to make a transaction with a

debit card to quickly and safely make a payment.

As per Claim 29:

The combination of Walker/ Fielder /Ginter discloses the limitations as shown in the rejections

above. Furthermore, Ginter as shown, also discloses the following limitations:

Transaction comprises payment by the second party with a prepaid gift card.

(See at least Column 249, Lines 63+)

Art Unit: 3692

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Ginter's method to allow the anonymous users to make a transaction with a

gift card to quickly and safely make a payment.

As per Claim 31:

Combination of Walker/Fielder discloses the limitations as shown in the rejections above. But,

Walker/Fielder as shown does not discloses the following limitation, but Ginter does:

Allowing parental restrictions on the types of transactions performed. (See at

least Column 271, Lines 41+)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of

the invention was made to modify the Walker's method of anonymous transaction as

taught by Ginter's method to restrict the under aged majority to only go into

transactions that are approved by adults. This will prevent children from getting

involved in wrong types of transactions.

Art Unit: 3692

#### Conclusion

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

11. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
